Care and Maintenance

Maintaining your ProQuartz Surfaces

ProQuartz and SIGMAquartz surfaces, are stylish and sophisticated, with enduring, lasting, beauty and strength.

Our surfaces, require minimal maintenance, and no sealing to retain the shine and brilliance.

Daily Care

Simply wipe the worktops with warm water, and a mild, non-abrasive cleanser and rinse with clean water.

In the case of stubborn marks, the use of a non scratch sponge or cloth, and a non-abrasive cleaner is recommended.

Simply rub gently onto the mark and clean with a damp cloth.

Scratch Resistant

ProQuartz is harder than natural stone and highly scratch resistant. However, refrain from using the ends of sharp objects, such as knives or screwdrivers, directly onto the surface.

Heat Tolerance

ProQuartz is structurally more heat resistant than other surfaces. However, like other stone tops, excessive heat may cause thermal shock and damage.

The use of a trivet, or hot pad to place under your hot pots and pans, is recommended.

Cleaning Products to Avoid

Cleaners that contain: Xylene, Toluene, Potassium Hydroxide or Caustic Soda. Paint removers and furniture strippers containing Trichlorethane or Methylene Chloride.

Cleaners that contain Pine Oil.

Without very thorough rinsing, these products can leave a residue behind. This residue then attracts and holds the dirt on the surface, eventually reducing the cleanliness of the surface and its appearance.

Abrasive scrubs/cleaners containing abrasive particles.

The abrasives could harm the surface, and if it is not completely rinsed, could leave a residue reducing the appearance of the surface.

Highly aggressive cleaning agents such as oven/grill cleaners, and dishwasher polishing agents that have a high alkaline level (pH 8.5 or higher).
